

“Making a Connection” Doesn’t Always Require a Social Network... Sometimes it Just Takes a Tube and a Coupling

The Ashcroft[®] Duralife[®] stainless steel pressure gauge is now available with a tubing connection...

For easy installation into tubed systems, Ashcroft[®] 2 ½" and 3 ½" Type 1009 Duralife[®] SS pressure gauges are now available with a ¼" or 6mm OD tubing connection in full scale ranges up to 7500 psi. The threadless, straight tube design allows the Type 1009 to be connected directly to pressure tubing systems via industry standard ferrule type mechanical grip couplings, eliminating the need for adapters and potential leak paths.

All Ashcroft[®] 1009 Duralife[®] gauges are equipped with the exclusive PowerFlex[™] movement, True Zero[™] pointer indication and a throttle plug. In addition, the optional PLUS![™] Performance feature can be included to dampen the effects of vibration and pulsation that can cause pointer flutter and shorten the life of the gauge.
